	Urgent	**Not Urgent**
Important	<u>Do</u> Size of finished project Amount of skeins needed Cost of project Adding a buffer variable to know how much fabric is needed to frame properly	<u>Schedule</u> Estimated time based on data from previous projects Variables for number of threads per stitch (1, 2, or 3) Can run program multiple times for different patterns
Not Important	<u>Delegate</u> Honestly, just doing everything in IntelliJ, but if I am still wanting more, I could try implementing the program to an interactive webpage.	<u>Delete</u> Option for planning project, or reporting completed project. Storing project results in a file that can be accessed for future analysis for other projects. Multiple colors, analyzing skein count for each color. Average days it will take me to complete based on previous projects. Considering half stitches or backstitches. Option for outputting size in cm not just inches. Frame size suggestions, or asking if the user has already chosen a frame. Returning what count of fabric would fit the pattern properly. Waste buffer taken into account for number of skeins needed.
